Diagnosis of the maintenance function - The method "MEDIAT"

has just been published by AFNOR Éditions

The productivity of a company depends very largely on the quality and competence of its maintenance department. However, maintenance is a difficult function to diagnose. In this short book, the author guides organizations in the implementation of the MEDIAT method, an appropriate diagnostic approach in the industrial, hospital, tertiary and even residential sectors.

Presenting and implementing a new strategy for improving and developing the maintenance function is the objective of this work. Using the MEDIAT method, developed and practiced for around ten years on numerous industrial and administrative sites, the author guides companies step by step in the diagnosis of their maintenance and the decision-making that follows. arise.

The result of decades of cumulative experience in the field, the work is structured around three main chapters. The first provides an overview of the main existing diagnostic methods (ADEPA-CETIM, etc.). The second presents the MEDIAT method as a whole and in detail. Finally, in a third and final chapter, illustrated with two detailed case studies, the author offers his strategic avenues for reflection to improve productivity, quality and efficiency of maintenance.

A simple, easy-to-apply practical guide. An essential work tool for maintenance workers and company *managers* (plant or technical directors, managers, consulting engineers, consultants, etc.) without forgetting teachers, trainers and students.
